Pricing Team Sheet

ASEAN Renewable Energy Corp - Green Corporate Bond (ISIN: USGRN0032025)

Prepared for RHB Malaysia Bank Wealth Customers

Date: 2-Sep-2025

Executive Summary

This Pricing Team Sheet provides detailed information on the indicative terms, pricing methodology, and allocation strategy for the ASEAN Renewable Energy Corp Green Corporate Bond. The bond is designed to support renewable energy projects in ASEAN with strong ESG impact objectives.

Indicative Terms & Conditions

ISIN	USGRN0032025
Issuer	ASEAN Renewable Energy Corp
Bond Type	Green Corporate Bond
Coupon	5.25% p.a. (Indicative)
Maturity Date	20-Sep-2027
Denomination	USD 500,000 minimum

Pricing Methodology

The coupon rate was determined based on the issuer's credit profile, prevailing U.S. Treasury yields, and spreads for comparable green bonds issued in the ASEAN region. Market demand, book-building dynamics, and ESG premium factors were considered in the pricing process.

Book-Building & Allocation

The book-building process involves collecting investor interest during the subscription period. Allocations will prioritize long-term institutional investors with ESG mandates, followed by private wealth clients. Final allocation is subject to regulatory compliance and suitability checks.

Final Pricing Table (Illustrative)

Scenario	Yield (%)	Price (per 100)
Base Case	5.25%	100.00
High Demand	5.00%	101.20
Low Demand	5.50%	98.75

Key Dates & Timeline

- Effective Date: 2-Sep-2025
- Book Building Opens: 5-Sep-2025
- Book Building Closes: 12-Sep-2025
- Settlement Date: 20-Sep-2025
- Maturity Date: 20-Sep-2027

Notes & Disclaimers

This Pricing Team Sheet is for illustrative purposes only. Final terms are subject to market conditions, investor demand, and regulatory approval. Investors should review the official Prospectus and Risk Disclosure documents before making any investment decision.

Detailed Market Commentary

Market Analysis Section 1

The ASEAN green bond market has experienced steady growth over the past five years, primarily fueled by increasing sustainability commitments among member countries. Governments have pledged net-zero targets, which is creating a favorable environment for green financing instruments.

Market Analysis Section 2

Malaysia's renewable energy demand is projected to grow at an annual CAGR of 8% until 2030, supported by the country's National Energy Transition Roadmap. This rising demand directly supports the issuance of renewable energy-linked bonds.

Market Analysis Section 3

Government incentives across ASEAN countries, such as tax exemptions and feed-in tariffs, have boosted the attractiveness of solar and hydropower projects. These incentives reduce risk for investors and enhance the appeal of corporate green bonds.

Market Analysis Section 4

Global institutional investors are increasingly allocating funds towards ESG-focused assets. Green bonds from ASEAN are gaining attention, as they provide exposure to emerging markets while aligning with global sustainability mandates.

Market Analysis Section 5

ASEAN Green Bond Standards have been aligned with International Capital Market Association (ICMA) principles. This harmonization enhances investor confidence by providing transparency and comparability with international frameworks.

Market Analysis Section 6

USD-denominated ASEAN bonds are attracting strong demand from foreign institutional investors. The currency denomination provides stability, making them particularly appealing to investors who seek diversification outside of local currencies.

Market Analysis Section 7

The renewable energy sector in ASEAN has a stable credit outlook. Issuers in this segment often benefit from government backing, long-term power purchase agreements, and strong cash flow visibility, making bonds less risky.

Market Analysis Section 8

Pension funds and sovereign wealth funds in Asia are increasing allocations towards green bonds. These long-term investors value the combination of steady returns and alignment with sustainable investment mandates.

Market Analysis Section 9

Malaysian financial institutions are playing a larger role in underwriting and distributing green bonds. Their active participation has improved investor access and strengthened secondary market trading activity.

Market Analysis Section 10

Renewable energy technologies in ASEAN are achieving cost parity with fossil fuels. This shift significantly reduces project execution risk, enhancing the credit quality of corporate issuers in the sector.

Market Analysis Section 11

Although inflationary pressures have slightly increased borrowing costs, the surge in ESG-focused demand has offset these challenges. Investors continue to value green bonds for their long-term resilience against economic shocks.

Market Analysis Section 12

Malaysia’s renewable energy transition roadmap provides a strong foundation for sustainable finance. Policy certainty from the government reassures investors of long-term commitments to green infrastructure development.

Market Analysis Section 13

Liquidity in the secondary market for ASEAN green bonds has been steadily improving. Greater participation from international investors has contributed to tighter bid-ask spreads and better price discovery.

Market Analysis Section 14

Cross-border partnerships, particularly with Japan and the European Union, have enhanced ASEAN’s green finance landscape. Joint initiatives focus on knowledge transfer, funding channels, and capacity-building programs.

Market Analysis Section 15

Corporate issuers of green bonds enjoy reputational benefits, as investors increasingly prioritize climate-conscious organizations. This brand value translates into broader investor participation and improved financing terms.

Market Analysis Section 16

Major ASEAN bond indices have started incorporating ESG and green bond components. This inclusion ensures higher visibility and attracts passive investment flows from global index-tracking funds.

Market Analysis Section 17

Long-term institutional investors are integrating climate risk assessments into their portfolios. As a result, renewable energy bonds are increasingly viewed as hedges against climate-related risks.

Market Analysis Section 18

The use of USD currency for bond issuance reduces foreign exchange risks for regional investors. This stability increases investor confidence and expands the potential investor base beyond local markets.

Market Analysis Section 19

Renewable energy investments in ASEAN have been outperforming fossil fuel projects in terms of risk-adjusted returns. Investors recognize the long-term viability of renewables compared to volatile oil and gas markets.

Market Analysis Section 20

The ASEAN Green Finance Taxonomy has introduced a standardized framework for classifying sustainable investments. This creates transparency, consistency, and comparability for investors evaluating green bond issuances.
